truExchange Item Sync Supply

What is Item Synchronization?

Item Synchronization is a global, Internet-based e-commerce service that allows companies to improve supply chain efficiency by providing a networked repositories called data pools to store standardized item, location, and trading partner data. The data pools serve as an "electronic library" by synchronizing data to ensure that the trading partners have access to up-to-date and accurate product information.

truExchange Item Sync Supply

Are your largest customers requiring that you post your item information to a data pool such as UCCnet, WWRE or Transora? Many suppliers are faced with finding a solution to address their item synchronization needs to satisfy the requirements of Wal-Mart, Lowe's, Ace Hardware, The Home Depot, Food Lion and other retailers.

Solid Solutions from an eBusiness Software Specialist

nuBridges is an eBusiness software provider who specializes in solutions specifically designed for the iSeries (AS/400) platform. Our item synchronization offering is just one of our many native iSeries (AS/400) software solutions focused on automating the exchange of critical business transactions, securely and reliably. truExchange Item Sync allows you to extend the reach of your ERP system to item synchronization. What does this mean to you? Our application can simply allow you to post your product information and any ongoing changes you make in your ERP systems' product master files directly to the data pools without additional steps. Our exclusive Auto-Flow Through feature can be used to provide a direct real-time translation and update capability from your ERP system to any of the data pools.

We created our item synchronization interface using the latest XML schema (XSD instead of DTD) that is supported by each data pool. The direct benefit to you of having a product that uses the most recently adopted standards is no additional cost for an unnecessary conversion from an old standard (DTD) to a new standard (XSD).

Easy to Implement

Our philosophy is to design software solutions that can drop in seamlessly into your environment. We don't require integration services, customization work or additional integration tools to deploy our solutions.

Key Features:
- Eliminates the need and expense of customized programming
- Links directly into your product/item files
- Approval facilities prior to updating Item Synchronization
- Automatic work lists for users
- Requires no duplicate data entry
- Automatically updates item catalog when you update your ERP files
- Native iSeries (AS/400) solution
- GUI screens for non-technical personnel
- Includes ERP Adapters for:
  - J. D. Edwards
  - SSA / BPCS
  - MAPICS

- Rapid Implementation
- Total Control
- Intelligent Workflow
- Ease of Use
- Auto Flow Through
- Response Interpretation
- Direct Data Access
- Immediate ROI
